

# Friends of the Shiawassee River

Winter Speaker Series presents:

## “Fish Passage & Recreational Potential on the Shiawassee River”

Thurs., January 14, 5:30-7:00 pm,

Baker College Welcome Center, Room E, 1309 S. M-52, Owosso

Presented by Wade Trim engineers. Historically, the Shiawassee River was key spawning grounds for many species of migratory fish from Lake Huron. Today, it has been fragmented with dams and other structures that limit the movement of recreational and economically important fish species while also deterring recreational activities like canoeing and kayaking. Follow the process of redesigning the Chesaning dam to provide a combination of community and ecological benefits while preserving the Showboat function. Learn how other communities upstream, such as Owosso

and Corunna, could benefit from similar projects.

This event is free and open to the public. Those concerned with issues of dams, river connectivity, recreation, and public policy are encouraged to attend.
